ALBÜMÜ

the fact that the \mathbb{Z}_2 -action is not free, the quotient space is not a manifold. The quotient space is a orbifold, which is a generalization of a manifold. The orbifold structure is important for the study of the moduli space of Riemann surfaces.

The orbifold structure is also important for the study of the moduli space of Riemann surfaces. The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces.

The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces. The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces.

The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces. The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces.

The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces. The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces.

The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces. The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces.

The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces. The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces.

The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces. The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces.

The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces. The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces.
